### **PART-G**

#### **[Impact of the pollution measures taken on conservation of natural resources and on the cost production]**

##### **a) Dust Suppression**

- Regular water spraying is being carried out on mine haul road, working site, waste dump yard, ore stack yard loading and unloading points by water tankers to reduce the dust levels.
- 500 mtrs of fixed water sprinkler is installed in main haul road.
- Regular water sprinkling on mineral transportation roads passing through the habitation area as well as other strategic point is being done regularly.
- Wet drilling is a common practice during drilling operation to reduce air pollution.
- Pre- wetting of blasting site and controlled blasting is being practiced reducing dust generation.
- The mineral transportation is being carried out by trucks covered with tarpaulin and properly sealed.
- No trucks are being overloaded at any point of time to avoid spillage Ore and OB in the haul road.

##### **b) Management of surface run - off & mine discharge water**

- All the surface run-off water from one side of the quarry during rainy seasons is allowed to channelize through well maintained garland drains having sedimentation pits. Finally, the surface run-off accumulated at Quarry "1&2" for ground water recharge. Effluent Treatment Plant is constructed for the treatment of excess surface run-off from Quarry 1&2.
- Further, at the other side of the quarry the surface run-off has been properly channelized to a big sump from where the whole water has been diverted to Quarry 3&4.
- From the quarry, water is pumped to an effluent treatment plant for detoxification of Cr<sup>+6</sup> and reduces the Total Suspended Solids (TSS) before any use or discharge.

##### **c) Solid waste management**

- Overburden/waste rock is being dumped in the earmarked dump area approved by IBM with suitable terracing. The terraces are stabilized and rehabilitated by massive plantation.
- Retaining walls have been constructed at the toe of various OB dumps to arrest the

flow solid material. Garland drains are constructed in and around the OB dumps for drainage of surface run-off.

- Settling pits and check dams inside the garland drain have been constructed to arrest the slit/ soil particles in the water. Yearly twice, the settling pits and garland drains have been desilted.

**d) Environmental monitoring.**

- Regular monitoring of ambient air quality is being carried out at four appropriate locations in core zone and in four locations in buffer zone as per statue.
- Regular monitoring of Ground water level is being carried out by the installed Piezometric bore wells inside mine lease area.

**e) Afforestation**

About 470 local samplings are planted in dump.

**f) Noise reduction**

- Heavy vehicles operating in mines have good noise control system. Silencers are maintained in good conditions.
- Regular maintenance of the vehicles/ machines is carried out to reduce the noise pollution.
- Controlled blasting is generally practiced minimizing the noise.
- Regular noise level monitoring is being done on monthly basis and the results are found below permissible limit.

**g) Medical facilities and health monitoring**

- All the employees undergo periodical medical checkup like IME & PME.
- M/s. Utkal polytechnic an occupational checkup health center at Bhubaneswar is periodically conducting initial and periodical examination of the persons working in the project regularly which is recognized by DGMS, Dhanbad.
- A dispensary facility is established at Saruabil Mines to carter for local community and employee of Saruabil & Kamarda mines.

#### **[Additional measures/investment proposal for environmental protecting including abatement of pollution, preservation of pollution]**

1. Regular maintenance of retaining wall around the foot of the dumps will be provided.
2. More garland drain shall be constructed and maintained all along the dump to channelize the water in a single point of storage as per approved mining plan.
3. One CETP(@1200KL/hr) has been constructed at Saruabil mines to treat the both mines seepage water and surface run-off water.
4. For the stability of the dumps regular slope monitoring is done by précised Total Station Equipment.

### **PART-I**

#### **Any other particular for improving the quality of the environment:**

The management of Tata Steel is committed for prevention of the pollution inside and surrounding the lease hold area. Environmental monitoring is being done in core & buffer zones of the lease area to ascertain & to take preventive measure to keep the parameters within stipulated norms.
